

CertikLabs

FOR IMMEDIATE RELEASE / 9 OCTOBER 2026

CertikLabs connects peptide testing to public, lot-specific verification

Partner-lab analysis, branded certificates and scannable public records bring the evidence behind a peptide label into view.

CertikLabs presents its peptide verification program: a documentation and review workflow that connects physical laboratory testing with public, lot-specific records. Buyers can open a published record, match the product and lot, and download the associated Certificate of Analysis or Endotoxin Report.

Physical testing is performed by partner laboratories. CertikLabs coordinates the testing and documentation workflow, reviews returned results against the source reports, and prepares branded certificates for publication. The original source documents are retained privately and unchanged to preserve the evidence trail.

Depending on the commissioned assays, a record may report peptide identity, chromatographic purity, measured content or endotoxin results. Each certificate states the tests actually reported; an endotoxin-only result is not presented as proof of identity, purity or content. Laboratory results describe the tested sample and do not establish clinical safety or suitability for human use.

Published records use a unique verification URL. The Verified by CertikLabs seal and QR codes connect buyers to the relevant record, where they can compare identifiers and read the certificate. PeptidesDirect is a customer represented in the published certificate collection.

Results requiring confirmation are held privately while secondary testing is investigated. The partner is asked to provide additional sealed samples from the same lot and comparison material where available. Only records approved for public release appear in the certificate collection.

CertikLabs is developing its future in-house laboratory capability; accreditation is in progress with a target of 2027 and is not currently claimed. Blockchain anchoring is planned, not a feature of current certificates. Today's evidence is the published lot record and its analysis document.

About CertikLabs

CertikLabs is a peptide testing coordination and verification platform. It connects partner-laboratory analysis with reviewed certificates and public, lot-specific records for customers and buyers. CertikLabs does not manufacture or sell peptides.
